

## LABORATORY PROTOCOL

1. Treatment partials
  - a. Limited to 6 anterior teeth or less (add a bicuspid for stability when necessary).
  - b. Need sufficient interocclusal space to accommodate the treatment partial.
  - c. Lab lead will inform the routing and triage leads when they can't accept any more lab cases.
  - d. When needed, the triage lead can request a consult with the lab lead on complex cases.
  - e. All patients needing treatment partials will be routed to the lab area for impressions after they have had their x-ray taken and prior to going to the oral surgery numbing area.
2. Other lab services (denture repairs, addition of teeth, etc.)
  - a. Other lab services will be evaluated on a case by case basis - those that we can treat will be routed to the lab area.
  - b. When needed, the triage lead or routing lead can request a consult with the lab lead on individual cases.
3. New patients will be accepted in the lab up until 11 a.m. on Saturday or until the max number of lab orders have been placed – whichever comes FIRST.
4. Verify that informed consent has been initialed.
5. The paper charts are NOT to be touched with gloved hands at any time.

PLEASE BE FLEXIBLE and THANK YOU for participating today.
